**Below are list of Assays for Medical Genomic Services using NGS and Microarray.**

For Medical Pathogen Identification Services please refer to **MBG-C0019**.

For other assays not listed below, individual projects and any other research collaborations, please contact MBG Centre for further information.

**The recommended sample types are as per published recommendations. Please contact MBG Centre for alternative sample type suitability.**

**All samples should be freshly collected and transported at 4°C following below guidelines.**

### Sample Details:

EDTA blood:	>2.5ml of blood in EDTA tube
Fresh Tissue:	>50mg tissue in saline dampened gauze to be received within 2hours of operation; or snap frozen in liquid nitrogen within 2hours of operation and stored below -70°C. Transport on dry ice.
FFPE:	5x10um sections selected by a pathologist to contain >50% viable tumour (avoid necrotic areas).
Buccal Swab:	Do not eat / drink for >1hour before collection. Rub swab inside the mouth with firm pressure for 1min. Place in the collection tube, seal and store between -20°C to 25°C. Transport within 48 hours.

### Notes:

- The Turn-around times (TAT) indicated are only inclusive of working days.
- Samples delivered before 11:00am will begin processing immediately resulting in shorter turnaround times.
- For Price details please contact MBG.
- For whole genome sequencing assay; MBG Centre recommends analysing relatives (proband plus parents; or siblings) to provide the most accurate interpretation.
