

MBG - Stem Regenerative Cell Processing Information:

- Initial Processing:
 - Pricing - Contact MBG Centre for pricing information
 - Processing of adipose sample up to two MBG – Stem Collection Tubes.
 - Additional MBG – Stem Collection Tubes (over two tubes) will be processed at an additional charge per tube.
 - Provides dose (s) for initial treatment.
 - Creates additional doses for banking at no charge **if cell yield is sufficient**.
- Banked Dose Processing charges : Contact MBG Centre for pricing information
- Annual fees for banked doses will be charged to owner after 12 months
- Standard syringe preparation is one dose per syringe per treatment site.

What you need to do before fat collection or shipment:

- **Call to schedule processing** – advanced scheduling is required to ensure timely processing.
- **There may be a one day delay for samples not scheduled in advance.**
- Review the case with a MBG - Stem veterinarian (not required, but recommended).
- Have the owner complete the Owner Consent form – important for future banking agreement.
- Freeze the ice pack at least 24 hours before use.

Shipping:

- Ship all samples the same day that they are harvested.
- Collection off at on Friday for Sunday processing is an option if arranged in advance.
- MBG – Stem will do everything possible to process and ship cells back on the day that the sample is received, but larger samples, unscheduled cases, or laboratory work load may create a delay of one additional day.

What MBG - Stem needs before a sample can be processed:

- Collection tube (s) labelled with the animal name.
- A completed Owner Consent Form.
- A completed Laboratory Submission form including
 - Animal, Vet, and Owner information
 - Animal injury information
 - Shipping instructions for return shipment of cells
 - Syringe and Order & Service specifications
