

I, _____ (“owner”), as the owner of the animal identified as _____ (“Animal Name”), do here by consent to have my veterinarian, _____ (“Veterinarian”), Conduct the MBG Stem Veterinary Cell Therapy Procedure described on page 2 of this consent form (the “Procedure”). I also agreed to follow the recommendations provided by my Veterinarian regarding the care and rehabilitation of my Animal. I understand the Cell Procedure includes a surgical procedure and that all surgical procedures entail some risk. I also understand that, although my Veterinarian and MBG – Stem believe this Cell Procedure may be helpful in assisting the healing of my Animal, no guarantees or warranties of any kind are being provided regarding the outcome, and that unforeseen adverse side effects or consequences can occur.

I agree that MBG – Stem may use any and all clinical or laboratory data related to my Animal and the Cell Procedure for any purpose, so long as my confidentiality is maintained. I acknowledge that I have read this consent form and the Cell Procedure description on page 2 of this form; and I agree with the terms. I also agree that my Veterinarian and MBG – Stem will have no liabilities from their providing this Cell Procedure for my Animal.

MBG – Stem may store (bank) any additional cells (doses), And / Or MBG – Stem may retain a retention sample, for potential future use. Even though cell banking may be requested, I understand that there may not be enough cells to create additional doses for banking. Cell doses that are not used in the initial treatment will be stored for up to one year at no cost. During that time, my Veterinarian may request processing and shipment of stored cell doses at an additional charge. Approximately in one year, I understand that MBG – Stem will endeavour to contact me using the contact information below, to ask if I want to arrange for fee – based annual storage of any cell doses stored for more than the first year. If MBG – Stem is unable to contact me, or if I do not agree to annual storage fees for banked doses, then the cells will be treated as abandoned, and MBG – Stem may utilize the cells for any purposes, such as for training or ongoing development of the technology, or MBG – Stem may destroy the cells at its sole discretion. In the event that banked doses are lost or not usable for any reason, MBG - Stem liability will be limited to no more than one year’s storage charges per Animal paid by Owner.

Owner Address	City	Country	Postal Code
---------------	------	---------	-------------

Owner Telephone	Mobile Phone	E-Mail
-----------------	--------------	--------

Owner Signature	Date
-----------------	------

Important–Banked cells will be stored for one year at no charge. Cells may be disposed of after 12 months if owner cannot bear ached or if Owner does not pay the storage fees.

Please let us know about your animal’s type of injury / disease: Recent Old (Chronic) Injury/disease

Please let us know the recent use of your animal before this injury:

Performance -training Breeding Retired Pleasure Other _____

Please let us know what outcome or performance level you expect from this therapy:

Prior Level Lower Level Breeding Pasture Sound Other _____

Single vs. Multiple Injections:

Your Veterinarian will determine the number and frequency of treatment with stem and regenerative cells. Some injuries / diseases may require multiple treatments. See MBG – Stem Bank below:

Procedures:

The following is a brief description of the procedures to be conducted on your animal and on the fat tissue sample collected from your animal. The actual procedures may vary according to the specific conditions and the clinical judgment of your Veterinarian.

Day1: Your Veterinarian will be collecting a small (10 – 50 grams) sample of fat from an area underneath the skin of your Animal. This may be done under local or general anaesthesia, as per the judgment of your Veterinarian. The incision may be approximately 2 – 3 inches long and will be sutured closed after the collection. There may be a small scar at the incision site, as with any surgical procedure. Your Veterinarian may begin antibiotics to help prevent any infection at the collection site. Your Veterinarian will deliver or ship the fat tissue sample in an insulated container to the MBG Centre

Day2: The MBG – Stem technicians will receive the fat tissue sample and process the fat to extract and concentrate the stem and regenerative cells. A number of steps will be conducted to maximize the number and activity of the cells. MBG Centre will count and assess the viability of the cells. The cells will be prepared for injection and shipped back to your Veterinarian and/or stored (banked) for future use

At Injection : Your Veterinarian will prepare the site on your Animal for injection of the stem and regenerative cells. This may involve local or general anesthesia. After injection, your Veterinarian will schedule the follow - up examinations and diagnostics.

Followup: It is imperative that you follow your Veterinarian’s advice for post-treatment care and rehabilitation and that you return your Animal for follow up evaluation. Good follow – up provides for the best possible outcome for your Animal. In addition, the follow – up provides vital information about the technology for the benefit of your Animal, and millions of other Animals that may be assisted from stem cell therapy.

MBG - Stem Bank : In the majority of cases there are sufficient cells obtained from processing your Animal’s fat tissue to bank (store) one or more doses of cells for potential future use. However, there is no guarantee that the processing of your Animal’s fat tissue sample will yield sufficient cells for both the initial treatment, plus for storing of one or more doses. Doses that are not used in the initial treatment will be stored for upto one year at no cost. During that time, your Veterinarian may request, on your behalf, processing and shipment of stored doses at an additional charge. If you change veterinarians or if you (or your Animal) relocate, then you may arrange for shipment of the cells to another veterinarian or location. Doses stored in excess of 12 months will be subject to annual fees. MBG Centre will attempt to contact you using the contact information that you provided, so it is important to notify MBG Centre of any change of address. If you cannot be contacted or if you do not pay the annual storage fee after the first year, then the cells will be treated as abandoned, and MBG Centre may use or destroy the cells at MBG - Centre’s discretion.
